Complete, real-time personnel tracking and accountability

Real-time, peer-to-peer networking – manage and view event status from multiple stations

Track respondents with the swipe of a card

Manage personnel and equipment

Control personnel data, certifications and medical information - expandable to include med record retrieval at hospital for injured personnel

Create predefined assignments for rapid personnel deployment

Easy starting, stopping and continuation of events

Incident commanders record PARs and other administrative actions with the swipe of a card

Fast generation of reports for current and archived event activity.

Automatic archiving of event data

Wizard-driven configuration tools

Easy-to-use drag and drop WYSIWYG card design tools

Import, export and attach to most ODBC compliant databases

Capture photos from any image source

Store multiple photos, fingerprints and detailed information for each cardholder

Custom dossier function and employee directories

Fast Find search option, and multi-level search capabilities provide flexible viewing, updating and printing choices

Central Database Storage capability with local mirroring and resynchronization of data

Print single cards or batch jobs to any Windows®-based or PVC card printer

Multi-level password login protects data integrity and increases security

Encode 1-D and 2-D bar codes

INCIDENT MANAGEMENT

WHEN PERSONNEL ARRIVE ON-SCENE, THE operator launches TeamTracer® on their portable computer, enters a brief description of the event, and either chooses from a predefined assignment list or creates a custom list on the fly. Date, time, elapsed time in assignment, and total time on scene are automatically recorded at all command stations for all personnel. As personnel swipe their Proximity, Smart, Magnetic Stripe or Barcode-based technology ID cards by a reader, their ID Badge appears on the screen for visual verification, and an entry is added to the Action Listing table associated with their assignment. Action Listing screens provide instant confirmation of personnel location or assignments. Networked PCs can also share personnel databases for multiple-incident events.

The operator has full control over the configuration and layout of the Action Listing table and can modify data fields, views and assignments at any time. To verify an action or individual, the operator only has to click the data field to retrieve the full record or ID card.

ID CARD DESIGN

BASED ON BADGEBUILDER® PHOTO ID software, TeamTracer® allows you to quickly produce attractive ID cards using one of the pre-configured card designs - or custom create an unlimited number of full-color card designs.

TeamTracer® comes with a variety of design tools which enable users to add bar codes and optional security enhancements to card designs, import graphics for backgrounds, and add logos and text. Users are also able to make global edits to card layouts, and TeamTracer® will automatically adjust card layout printer settings. ID badges can be printed by any Windows®-based card printer.

REPORT GENERATION

AUTOMATICALLY ARCHIVED EVENT DATA CAN be retrieved, sorted and printed at any time using the Archive Report Wizard.

OPTIONAL CARD SECURITY FEATURES

Magnetic stripe encoding

Signature and Fingerprint capture

Mifare® Smart Card Encoding

Custom badge report creation

Double-sided card printing

TeamTracer is currently being used by:
